

Who we are for

We can segment our community into three main groups:

1. **Future Gazing:** explore the future possibilities of our world

Types of stories:

- Bill Gates has a master plan for battling climate change
- What gene editing can do for humankind
- If aliens exist, here's how we'll find them
- Clubhouse and social audio apps are having a moment
- The race to teach sign language to computers
- The rules of the tech game are changing
- If you're so smart, why aren't you rich?
- The games that smart people play
- Extraterrestrial engineering

2. **Humans and Humanity:** uncover the wonders of the human mind and experiences

Types of stories:

- How to be a genius
- The science of terrible men
- The fence is uncomfortable, but it affords the best view
- What if you could describe your dreams while dreaming?
- Pause, reflect, think
- Why natural beauty nourishes our spiritual and social selves
- How Daoism shatters our illusions of time and being
- The scars of solitary
- Pause, reflect, think
- The extraordinary trial of the child soldier who became a brutal rebel commander
- Meet Carl Hart: parent, Columbia professor — and heroin user

3. **Behind the news:** dig into the bigger picture behind the headlines.

Types of stories:

- A brief global history of the war on cannabis
- United Kingdom: Need a ride (Uber/gig economy)
- Pretty much anything from DailyChatter
- Genocide is the wrong word for the horrors of Xinjiang
- The biggest lesson of GameStop
- Myanmar's coup turns the clock back a decade
- Hong Kong's historic businesses face an uncertain future
- Cocaine: Colombia weighs a new aerial war on drugs
- The Spectacular boom on Wall Street
- The brutal third act of Vladimir Putin
- Why leave the EU, when you can shape it instead?
- If Big Tech has our data, why are targeted ads so terrible?

Curio creates a vibrating campus where life long students of different expectations and backgrounds can come together.

Our Content

What we look and feel like

We don't claim to know all of the answers and find stories that reinforce a specific way of being. Rather, we use questions to examine the **values, principles, and beliefs of a person** - and allow a person to learn through their own discovery.

We are cultivating a place that is enjoyable, somewhere that leaves you feeling delighted, energised and contemplative. When serious topics feel heavy, people shy away from the subject - curtailing who is invited to the conversation. We want to open those conversations. We choose to discuss serious topics in a way that doesn't feel like work. We want people to feel excited to go out and discuss what they've learnt.

What we sound like

In order for people to think and feel about subjects deeply, we are personal where we could be standoffish or aloof. We ask thoughtful questions where we could be playing devil's advocate. We are active participants in the dialogue where we could be an authority on the subjects we cover. We are thoughtfully provocative; we approach serious topics with playfulness.

Our values

We are making the world our classroom

Today, journalism is associated with news and information, we see journalism – including opinions, analyses, investigations - as a framework to tell excellent stories.

We see the news as a gateway to making the world our classroom

We believe that when the best journalism is combined with more specialised insights from leading academics and thinkers in the world, concepts come alive and allow us to understand issues more deeply and grow as people.

We are building bridges not echo chambers

A shift in trust away from voices of authority has put people into silos more than ever before. Instead of pushing our own objectives and viewpoints, we curate stories that pose questions, and challenge people's assumptions and perceptions.

We are carefully designed for your experience

Stories have been given a shelf-life, but like a good book, or movie, they can be picked up at any moment and provide practical and relatable examples. By utilising curation and discovery, we present stories in a way through which we can learn from.

The building blocks

A living list of different frameworks that people can pick up and utilise: offering different expertise that can be picked up in one's own learning.

News & Analysis

To understand the forces shaping our world, we need context. With news and analysis, you will find expert reporting with rich and valuable insights.

Feature stories

What might start as a question about a college admissions scandal, can quickly unravel itself into a fascinating tale about a con man sitting at the heart of it. Here, you'll find stories that are as long in its thralls and complications as the subject requires it to be.

Opinion

What does Yuval Noah Harari think about the world after coronavirus or Tim Harford's reflections on technology and innovation? Opinion pieces help you to gather insights from leading thinkers.

Conversations (interviews, panels, podcasts)

In their own words - and sometimes their own voice - we gather insights from some of the most compelling and interesting thinkers on the new world order, their personal journeys, and our changing communities.

Ideas

From the world of science, we bring deep explorations on topics. Here, you'll find big ideas that challenge our perception of self and the world around us.
